

As soon as I first installed my XM Radio I immediately started receiving the benefits of it. XM has so much variety to offer to its listeners with amazing quality. There are a lot of cities that have multiple stations playing the same kind of music. This competition doesn't offer much for variety. I personally am a huge fan of club music and techno. Boston has no radio station at all dedicated to this genre of music.

My job occupation requires me to be on the road all day. I have grown to depend on the newly available Traffic and Weather reports that XM offers. With it's continuous updating of traffic and weather conditions, I always know what to expect on the roads and it helps get my job done more efficiently.

I urge the FCC to please reject the NAB's petition 04-160 and support XM so I can continue to receive the benefits that XM offers me
